

SOFTWARE

is a set of instructions that tells a computer what to do. It is like a recipe that guides the computer to perform specific tasks.

TWO CATEGORIES OF SOFTWARE

01

APPLICATION
SOFTWARE

02

SYSTEM
SOFTWARE

APPLICATION SOFTWARE

- is a type of computer program designed to help users perform specific tasks.

SYSTEM SOFTWARE

- is a type of computer program designed to run and manage the computer's hardware and basic operations.

- It acts as a bridge between the hardware and application software, ensuring that all components of the computer function together smoothly

EXAMPLES OF APPLICATION SOFTWARE

- Word Processing Application
- Spreadsheet Application
- Database (Management System)
- Control and Measurement System
- Apps and applets
- Video Editing Applications
- Graphics Editing Application

EXAMPLES OF APPLICATION SOFTWARE

- Audio Editing Application
- Computer – aided design

WORD PROCESSING APPLICATION

Do you need all
this stuff just to
write a blog post
or short story?

Could a free
word processor
do the same job
for you?

Yes

No

SPREADSHEET APPLICATION

GRAPHICS EDITING

COMPUTER AIDED DESIGN

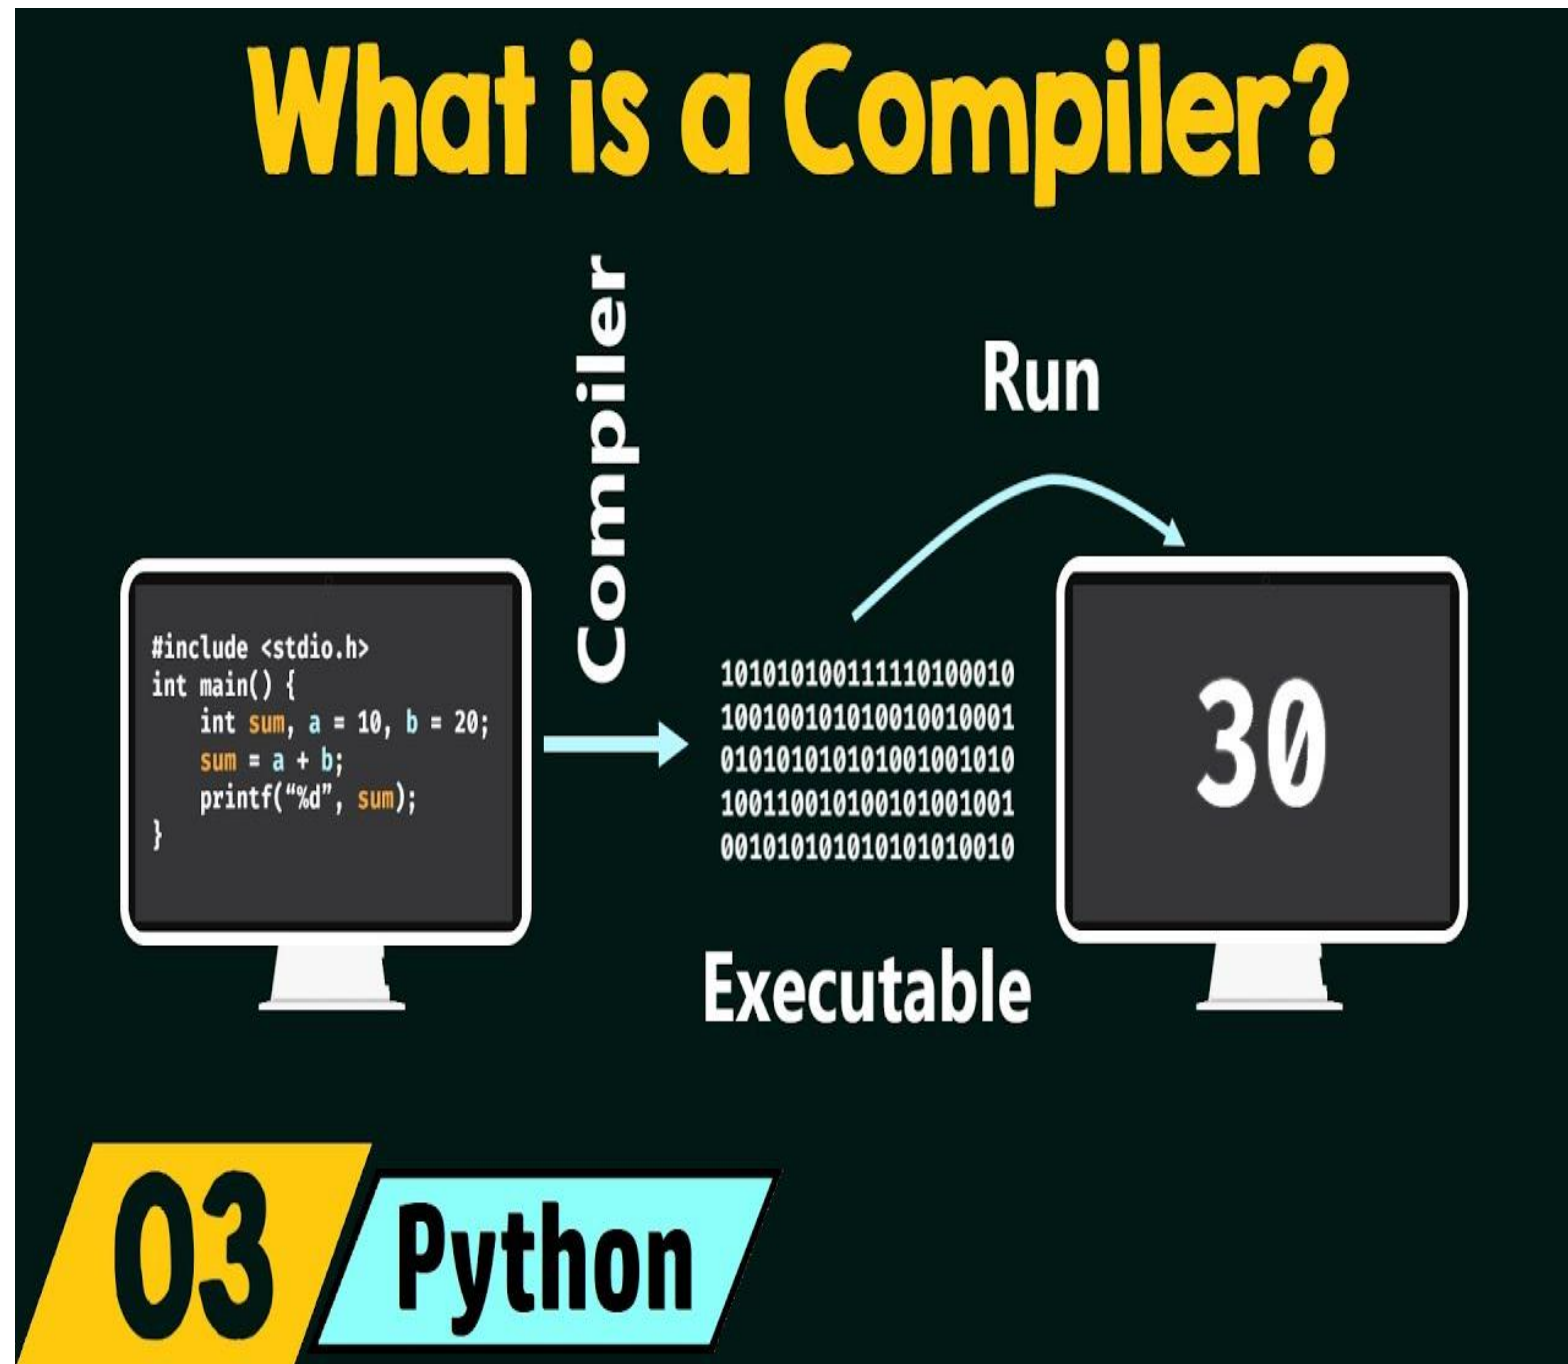

EXAMPLES OF SYSTEM SOFTWARE

- Compilers
- Linkers
- Device Driver
- Operating System
- Utilities

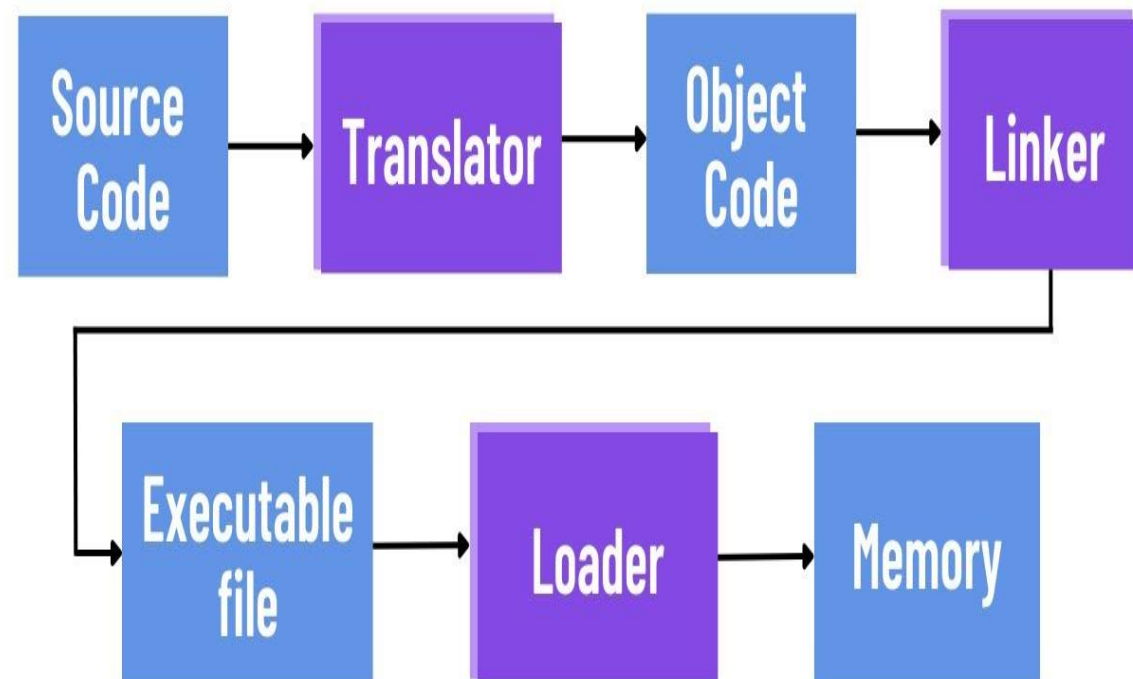

COMPILED

- is a software that converts the source code to the object code.

LINKERS

What is Linker and Loader

- a software tool that plays a crucial role in the compilation process of a program.
- It takes the object code generated by the compiler and combines it with other necessary libraries and modules to create an executable file.

DEVICE DRIVERS

- It enables communication between an operating system or application and hardware or peripheral devices

OPERATING SYSTEM

- is the program that, after being initially loaded into the computer by a boot program, manages all of the other application programs in a computer.

UTILITIES

is a program or tool that performs specific tasks to enhance productivity, efficiency, functionality, or maintenance of a computer system.
